

# Functional Analysis With Intervention Planning

## Antecedents

Factors which preceded a behaviour

Consider situational (where, when?), social (who was or wasn't there?) and emotional states.

## Behaviours

## Consequences

What happened as a result of the behaviour?

What are the short-term and long-term factors that make this behaviour more likely to happen again?

## Potential interventions on antecedents

What changes could be made to antecedents to reduce the likelihood of the behaviour?

## Potential interventions on behaviours

What alternative behaviours could be attempted?

## Potential interventions on consequences

What changes could be made to consequences to reduce the likelihood of the behaviour?
